

DuPont™ Streamline®

herbicide

Turn up the power on brush control

Keeping rights of way clear is critical to the safety of the people who live or work nearby and count on an uninterrupted power supply. Overgrown brush can create hazards and interfere with infrastructure. For an added challenge, the need to control brush and preserve a grass understory may require potentially dangerous hand-cutting.

Count on DuPont™ Streamline® herbicide

Now, there is an option when application selectivity is as important as quality brush control. DuPont™ Streamline® herbicide delivers reliable control of boxelder, hackberry, mesquite and other hard-to-control brush species in a single product with minimal harm to desirable grasses. So you can get the control you need to help keep utility lines safe and clear and the power uninterrupted.

“Streamline® gives you the ability to control one species while protecting another. This is important to us because our goal is to remove the brushy-type plants while maintaining the grassy look that’s already established and fill in with plants like wildflowers.”

— Paul Merrick,
Rights-of-way team leader, South Kentucky
Rural Electric Cooperative Corporation (RECC)

The benefits of choosing Streamline® herbicide

- ❑ Provides effective control of mesquite, boxelder and many other hard-to-control species yet is gentle on many desirable grasses
- ❑ Promotes the grass understory, preserving desirable vegetation
- ❑ Can be used as a spot treatment in difficult situations, such as rock outcroppings or other areas where it is dangerous to hand cut
- ❑ Provides lasting control, which can help extend the time between applications
- ❑ Features a recently approved active ingredient with a novel mode of action
- ❑ Improves efficiency — low use rate product is measured in ounces, not pounds, reducing storage, handling and mixing concerns
- ❑ Is easy to work with — low-odor, dry formulation mixes easily and remains in suspension
- ❑ Is not a federally restricted-use herbicide

How to get the best results with DuPont™ Streamline® herbicide

Apply DuPont™ Streamline® at a rate range of 7.5 to 11.5 ounces per acre at full leaf stage, late June/July, when brush plants are actively growing.

Application rates cannot exceed 11.5 ounces per acre per year.

For optimum postemergence performance, include a high-quality methylated seed oil (MSO)-based adjuvant to the spray solution.

Streamline® may be applied by ground or air. For best results, use at least 10 gallons per acre (GPA) spray solution for ground or 15 to 25 GPA by air.

Excessive wetting of the target brush is not necessary, but good spray coverage of the target plant is needed for best results.

Streamline® can provide long term control of susceptible brush. The length of control is dependent upon the application rate, condition and growth stage of target brush, environmental conditions at and following application, and the density and vigor of competing desirable vegetation.

Best results for long term brush control occur when grasses and other desired vegetation are allowed to recover from adverse environmental conditions and compete with undesirable brush or weeds.

When to use Streamline® herbicide

Use Streamline® herbicide when sensitivity to desirable grasses on a right of way is a concern. It provides effective, broad-spectrum control of encroaching brush to help keep a site clear and safe while helping to maintain desired vegetation.

Streamline® also can be used for general weed control for non-crop applications on private, public and military lands.

Brush Controlled (partial list)

Ash	Multiflora rose
Black locust	Poplar, yellow
Blackberry	Snowberry
Boxelder	Sugarberry
Eastern red cedar	Sumac
Hackberry	Tree of Heaven
Honeysuckle	<i>(Ailanthus Altissima)</i>
Maple, red	Willow
Mesquite
